Traffic Impact Study
Novatech File No. 118178

This revised Traffic Impact Study has been prepared in support of the Brown Lands subdivision. The subdivision is located on the northeast corner of the County Road 29/Christian Street/Strathburn Street/Gleeson Road intersection.

This revised study has been prepared to review modifications to the proposed Draft Plan as well as to address Municipality and community concerns.

If you have any questions or comments regarding this report, please feel free to contact Brad Byvelds, or the undersigned.

Yours truly,

NOVATECH

EXECUTIVE SUMMARY

This revised Traffic Impact Study (TIS) has been prepared in support of the Brown Lands subdivision, located on the northeast corner of the County Road 29/Christian Street/Strathburn Street/Gleeson Road intersection. The TIS has been revised to review modifications to the proposed Draft Plan as well as to address Municipality and community concerns. Revisions to the report incorporate an operational analysis of an expanded study area including the County Road 29/Strathburn Street/Gleeson Street, Christian Street/Almonte Street, Strathburn Street/Malcolm Street, and Malcolm Street/Almonte Street intersections. A sensitivity analysis has been included in Section 6.4 to review the impacts of the development should a higher proportion of vehicles use Malcolm Street. Section 8.0 has been updated to include a discussion of alternatives considered to limit impacts of the proposed development on Malcolm Street and to review future pedestrian and cycling improvements to Strathburn Street and Malcolm Street.

Currently the subject site is currently occupied by farmlands. The property has a 'Residential' Land Use from the Municipality of Mississippi Mills Official Plan (OP) and is zoned as 'Development' area in the Zoning By-law (ZBL). From the Lanark County OP the property has a 'Settlement Area' Land Use.

The Brown Lands subdivision includes a total of 143 single detached units, 18 semi-detached units, and 74 townhouse units. The development proposes two new accesses, one to Strathburn Street mid-block between County Road 29 and Malcolm Street and one to County Road 29 northwest of the County Road 29/Christian Street/Strathburn Street/Gleeson Road intersection. The development is anticipated to be constructed in phases with full buildout occurring in 2029.

The conclusions and recommendations of this TIS can be summarized as follows:

- The proposed development is anticipated to generate 153 trips (38 in, 115 out) in the AM peak and 198 trips (125 in, 73 out) in the PM peak;

- Site generated traffic is not anticipated to have a significant impact on the operating conditions at the County Road 29/Strathburn Street/Gleeson Road, Christian Street (CR29)/Almonte Street, Strathburn Street/Malcolm Street, and Almonte Street/Malcolm Street intersections;

- The County Road 29/Street 1 intersection is anticipated to operate with a LOS B during the AM and PM peak hours under the 2034 total traffic conditions. A southbound left turn lane is not warranted at this intersection. However, a northbound right turn taper is recommended based on the projected traffic volumes,

- The Strathburn Street/Street 2 intersection is anticipated to operate with a LOS A during the AM and PM peak hours under the 2034 total traffic conditions. Auxiliary turn lanes are not warranted at this intersection;

- Based on the sensitivity analysis of an unrealistic traffic distribution and assignment, 50% of site traffic arriving and departing to the east via the Almonte Street/Malcolm Street intersection is anticipated to increase southbound delays from 13 seconds to 15 seconds during the AM peak hour and from 17 seconds to 21 seconds during the PM peak hour at the Almonte Street/Malcolm Street intersection. The southbound delays correspond to a LOS B or C and are considered acceptable. However, it is our professional opinion that due

to the layout of the subdivision, turn restrictions at the Strathburn Street/Street 2 intersection, and operations at the Christian Street/Almonte Street intersection, the proposed subdivision traffic using this route will be far less;

- Sufficient intersection sight distance is available at each access for all turning movements;

- Sidewalks are proposed on one side of all roadways within the subdivision to provide pedestrian connectivity to the surrounding roadways and the proposed park. Cyclists will be accommodated within shared use lanes along the roadways within the subdivision;

- A new stone dust pathway is proposed through the pump station/park, connecting Street 2 and Street Five. It will continue north of Street 5 along the north tributary. A stone dust pathway is also proposed in the northeast corner of the subdivision, connecting Street 5 to the existing mountain bike trail along the Mississippi River. Opportunities for a potential river lookout at this location will be investigated during the detailed design of the subdivision;

- Signage is proposed to prohibit the southbound left turn movement from Street 2 onto Strathburn Street. The proposed signage is intended to minimize the impacts of development traffic on the existing community along Malcolm Street;

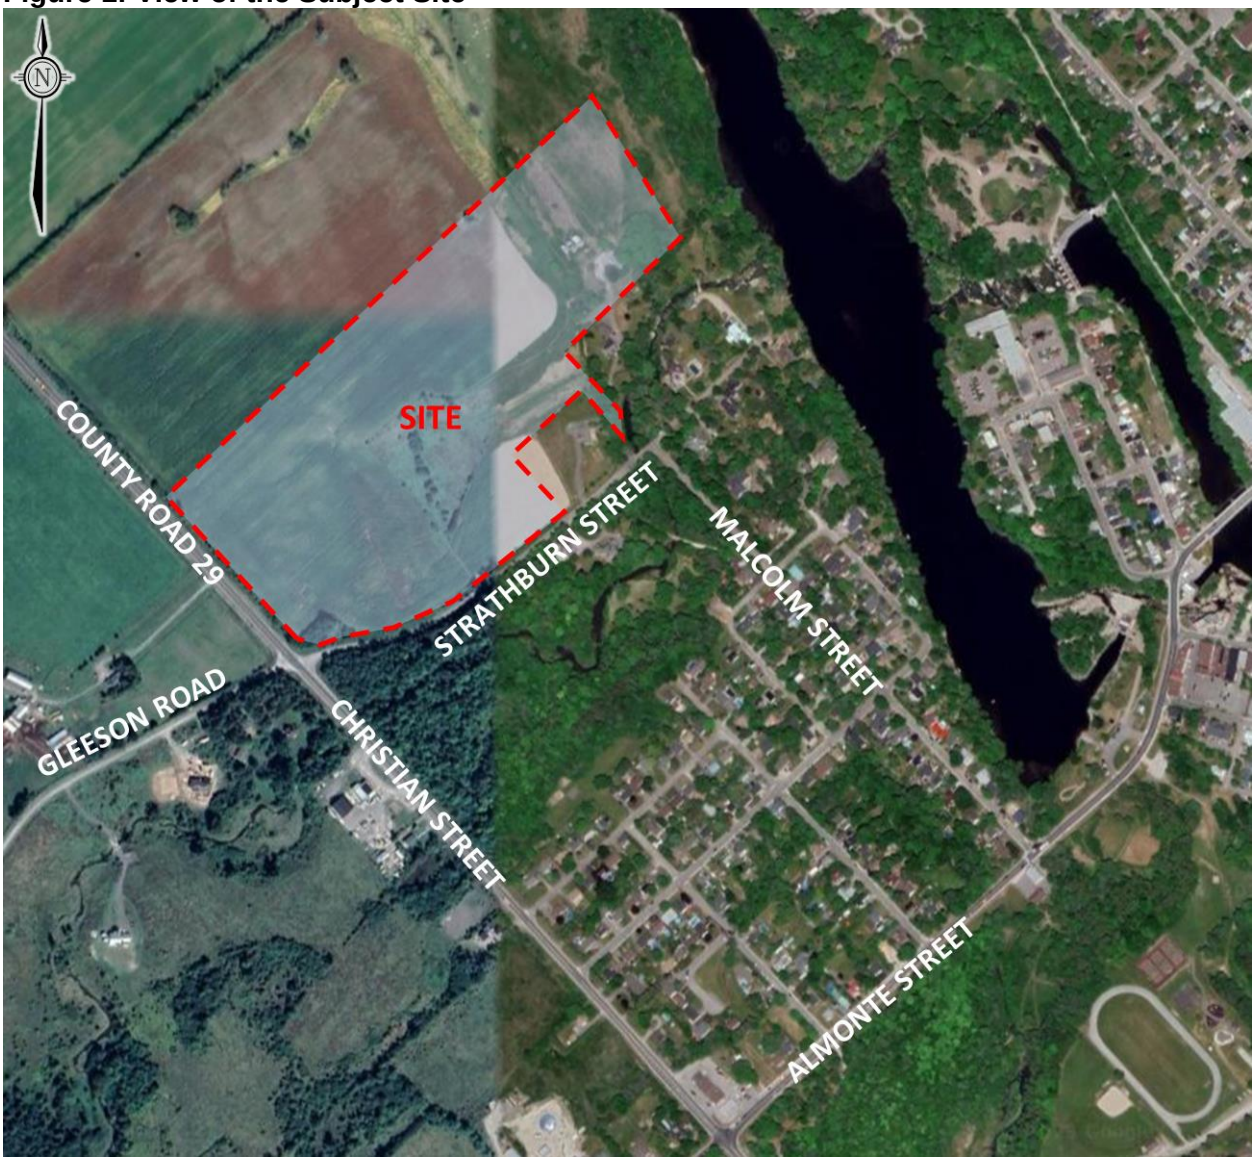
- The future cycling and pedestrian improvements identified in the 2016 MMTMP will provide system connectivity between the proposed on-site facilities and the existing community to the southeast. As the Municipality is currently updating the TMP, it is recommended that the aforementioned facilities be prioritized to meet the needs of the existing and future communities.

1.0 INTRODUCTION

This revised Traffic Impact Study (TIS) has been prepared in support of the Brown Lands subdivision, located on the northeast corner of the County Road 29/Christian Street/Strathburn Street/Gleeson Road intersection. The TIS has been revised to review modifications to the proposed Draft Plan as well as to address Municipality and community concerns. Revisions to the report incorporate an operational analysis of an expanded study area including the County Road 29/Strathburn Street/Gleeson Street, Christian Street/Almonte Street, Strathburn Street/Malcolm Street, and Malcolm Street/Almonte Street intersections. A sensitivity analysis has been included in Section 6.4 to review the impacts of the development should a higher proportion of vehicles use Malcolm Street. Section 8.0 has been updated to include a discussion of alternatives considered to limit impacts of the proposed development on Malcolm Street and to review future pedestrian and cycling improvements to Strathburn Street and Malcolm Street.

An aerial view of the subject site is provided in **Figure 1**.

Figure 1: View of the Subject Site



Currently the subject site is currently occupied by farmlands. The property has a 'Residential' Land Use from the Municipality of Mississippi Mills Official Plan (OP) and is zoned as 'Development' area in the Zoning By-law (ZBL). From the Lanark County OP the property has a 'Settlement Area' Land Use.

1.1 Proposed Development

The Brown Lands subdivision is proposed to include a total of 143 single detached units, 18 semi-detached units, and 74 townhouse units. The development proposes two new accesses, one to Strathburn Street mid-block between County Road 29 and Malcolm Street and one to County Road 29 northwest of the County Road 29/Christian Street/Strathburn Street/Gleeson Road intersection. The development is anticipated to be constructed in phases with full buildout occurring in 2029.

A copy of the Draft Plan of Subdivision is included in **Appendix A.**

1.2 Analysis Parameters

The study will include an analysis of the future accesses to County Road 29 and Strathburn Street, the County Road 29/Christian Street/Strathburn Street/Gleeson Road intersection, the Almonte Street/Malcolm Street intersection, the Malcolm Street/Strathburn Street intersection, and the Almonte Street/Christian Street intersection for the following years:

- 2029 Full subdivision build-out
- 2034 Five-year horizon

1.3 Analysis Methods

Intersection capacity analysis was completed using Synchro 11 software. This software uses methodology from the Highway Capacity Manual (HCM), published by the Transportation Research Board, to evaluate signalized and unsignalized intersections.

Intersection operating conditions are commonly described in terms of a Level of Service (LOS) and volume to capacity (v/c) ratio. LOS is a quality measure of speed, freedom to manoeuvre, interruptions, comfort, and convenience. Letters are assigned to six levels, with LOS 'A' representing optimal operating conditions and LOS 'F' representing failing operating conditions. Vehicle capacity is defined as the maximum number of vehicles that can pass a given point during a specified period under prevailing traffic conditions.

The LOS of a signalized intersection is typically related to the stopped delay per vehicle, measured in seconds. In the 2010 HCM, delay is defined as a measure of driver discomfort and frustration, fuel consumption, and lost travel time. For signalized intersections, Exhibit 18-4 of the 2010 HCM defines the relationship between control delay and LOS as follows:

LOS	Delay (sec)
A	<10
B	10 to 20
C	20 to 35
D	35 to 55

LOS	Delay (sec)
E	55 to 80
F	>80

At signalized intersections, the MTO *General Guidelines for the Preparation of Traffic Impact Studies* identify a v/c ratio of 0.85 as the threshold that defines a 'critical' movement.

The LOS of an unsignalized intersection is based on average control delay and is defined for individual movements. Control delay includes initial deceleration, queue move-up time, stopped time and final acceleration. For unsignalized intersections, Exhibit 19-1 of the 2010 HCM defines the relationship between control delay and LOS as follows:

LOS	Delay (sec/veh)
A	<10
B	10 to 15
C	15 to 25
D	25 to 35
E	35 to 50
F	>50

In this study, movements at signalized and unsignalized intersections have been evaluated in terms of the LOS as defined in the foregoing tables. Mitigation measures will be considered for movements with a LOS of E or F for unsignalized intersections, or a v/c ratio exceeding 0.85 for signalized intersections.

2.0 EXISTING CONDITIONS

2.1 Roadways

County Road 29 is a north-south roadway that extends from Ottawa Road 29 in the north to Ramsay Concession 8 in Carleton Place. Per the Municipality of Mississippi Mills 2016 Transportation Master Plan (MMTMP) it is an arterial road south of Almonte Street and a collector road north of Almonte Street. From Wylie Street to Old Perth Road, County Road 29 is known as Christian Street. Within the vicinity of the subject site, it has a two-lane undivided rural cross section with gravel shoulders. It has a posted speed limit of 60km/hr within the Town of Almonte, transitioning to a posted speed limit of 80km/hr approximately 350m north of Strathburn Street (north of the subject site). For the purposes of this report, this roadway is referred to as County Road 29 within the study area.

Strathburn Street is an east-west collector roadway that extends from County Road 29 to the Mississippi River. It has a two-lane undivided rural cross section with a road platform width of approximately 6.1m. It has a regulatory speed limit of 50km/h.

Gleeson Road is an east-west local roadway that extends from Ramsay Concession 8 to County Road 29. It has a two-lane undivided rural cross section with a gravel surface and a regulatory speed limit of 50km/h.

Malcolm Street is a north-south collector roadway that extends from Strathburn Street to Almonte Street. It has a two-lane undivided rural cross section from Strathburn Street to Dunn Street, where it transitions to an urban cross section with a sidewalk on the west side of the road. It has a posted speed limit of 40km/hr.

Almonte Street is an east-west collector roadway that extends from Mary Street to the Town of Almonte western limit. It has a two-lane undivided urban cross section and a regulatory speed limit of 50km/h.

2.2 Intersections

The County Road 29/Strathburn Street/Gleeson Road intersection operates under side street stop control, with free flow on County Road 29. A northbound right turn taper is provided along County Road 29. No other auxiliary lanes are currently provided at this intersection.

The Almonte Street/Christian Street intersection operates under the control of a traffic signal. A southbound auxiliary left turn lane is provided. No other auxiliary lanes are currently provided at this intersection. Pedestrian signal heads are provided on all approaches.

The Strathburn Street/Malcolm Street intersection operates under side street stop control on Malcolm Street. No auxiliary turn lanes are currently provided at this intersection.

The Almonte Street/Malcolm Street intersection operates under side street stop control on Malcolm Street. No auxiliary turn lanes are currently provided at this intersection. A pedestrian crossover type B is provided on the eastbound leg of the intersection.

2.3 Pedestrian and Cycling Facilities

Currently there are no sidewalks or cycling facilities provided on County Road 29, Strathburn Street or Gleeson Road within the vicinity of the proposed development. Almonte Street has a sidewalk on the north side between Christian Street and Euphemia Street which continues to the east on the south side of Almonte Street. Malcolm Street has a sidewalk on the west side from Main Street to Dunn Street.

The Almonte Riverside Trail begins along the north side of Strathburn Street mid-block between County Road 29 and Malcolm Street.

2.4 Transit

Currently there are no transit routes offered within the vicinity of the subject area.

2.5 Existing Traffic Volumes

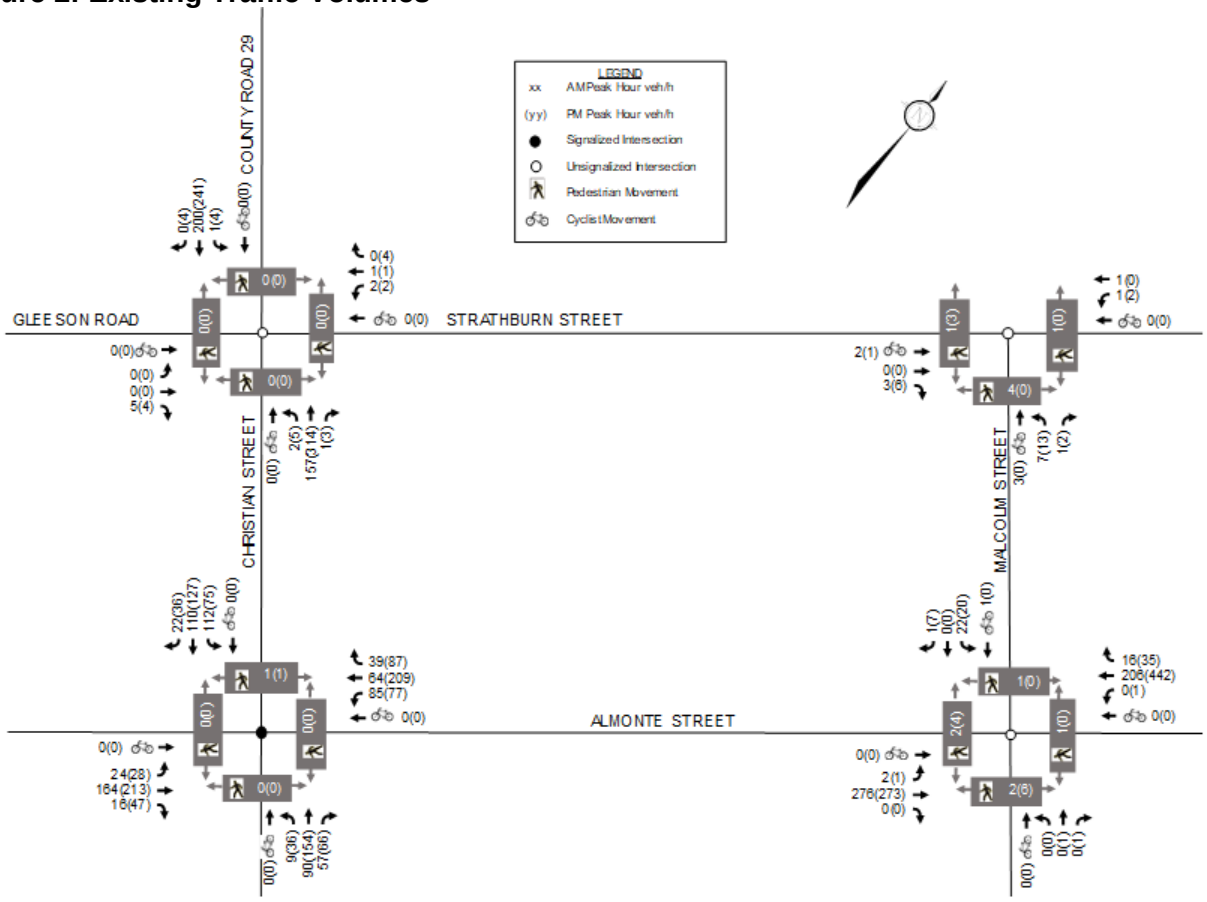
Weekday traffic counts were completed during the AM, mid-day, and PM peak periods (7:00-10:00AM, 11:30AM-1:30PM, and 3:00-6:00PM) and were used to determine the existing pedestrian, cyclist, and vehicular traffic volumes at the study area intersections. The traffic count dates and observed AM and PM peak hours are summarized in the following table.

Table 1: Traffic Count Summary

Intersection	Date	AM Peak Hour	PM Peak Hour
Almonte Street/Christian Street (CR29)	June 6, 2023	7:30-8:30AM	3:45-4:45PM
CR29/Strathburn Street/Gleeson Street	August 17, 2023	9:00-10:00AM	3:45-4:45PM
Malcolm Street/Strathburn Street	August 16, 2023	7:45-8:45AM	5:00-6:00PM
Almonte Street/Malcolm Street	August 17, 2023	8:45-9:45AM	4:00-5:00PM

Observed weekday AM and PM peak hour traffic volumes at the study area intersections are shown in **Figure 2**. Peak hour summary sheets of the above traffic counts are included in **Appendix B**.

Figure 2: Existing Traffic Volumes



3.0 PLANNED CONDITIONS

The construction of the full development will occur in phases with full buildout occurring in 2029. At this time there are no other significant developments owned by others within the vicinity of the study area that are anticipated to impact the proposed development.

The following table summarizes the active transportation projects in proximity of the subject site, as described in Table 34 of the MMTMP.

Table 2: Mississippi Mills Infrastructure Project Prioritization Plan Summary

Facility Type	Roadway	From	To	Priority
New Concrete Sidewalks	Almonte Street	Euphemia Street	Malcolm Street	Medium
	Almonte Street	Malcolm Street	Mill Street	Medium
	Malcolm Street	Strathburn Street	Dunn Street	Low
	Strathburn Street	Christian Street	Malcolm Street	Low
Urban Primary Routes	Almonte Street	Christian Street	Malcolm Street	High
Urban Secondary Routes	Malcolm Street	Strathburn Street	Almonte Street	Medium
	Strathburn Street	Christian Street	Malcolm Street	Medium

4.0 SITE TRAFFIC

4.1 Trip Generation

Trip generation assumptions are based on the Institute of Transportation Engineers' (ITE) *Trip Generation Manual* (11th Edition). The proposed residential development was estimated using the ITE code 210 (Single-Family Detached Housing) for Single Lots and ITE code 220 (Multifamily - Low-Rise) for the townhouses. **Table 3** outlines the trip generation results using the relevant rates for the proposed development.

Table 3: Trip Generation

Dwelling Type	Land Use Code	ITE Code	Units	AM Peak			PM Peak		
				IN	OUT	TOT	IN	OUT	TOT
Single Family	Single-Family Detached Housing	210	143	26	77	103	88	51	139
Semi-Detached	Single-Family Attached Housing	215	18	1	3	4	4	3	7
Townhouse	Multi-Family Low-Rise	220	74	11	35	46	33	19	52
			Total	**38**	**115**	**153**	**125**	**73**	**198**

From the previous table, the proposed development is anticipated to generate 153 trips (38 in, 115 out) in the AM peak and 198 trips (125 in, 73 out) in the PM peak.

4.2 Trip Distribution

The distribution of trips has been derived based on the existing traffic patterns and is described as follows:

- 20% to/from the north via County Road 29
- 20% to/from the south via County Road 29
- 50% to/from the east via Almonte Street
- 10% to/from the west via Almonte Street

4.3 Trip Assignment

Based on the layout of the subdivision and logical routing assumptions all trips generated by the proposed development have been assigned to the accesses at County Road 29 and Strathburn

Street. A summary of the percentage of trips assigned to each access can be seen in the following table.

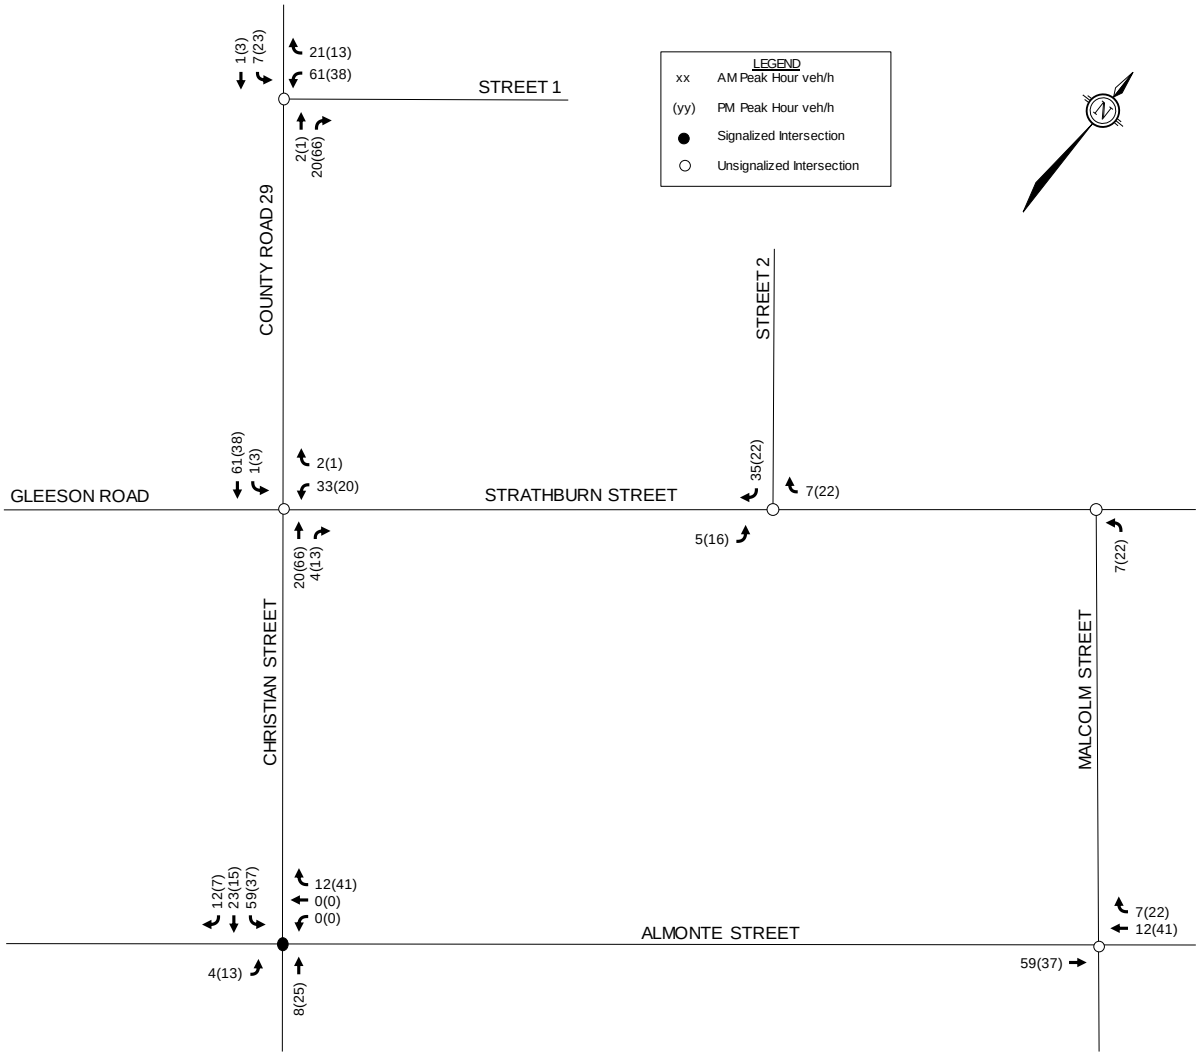
Table 4: Trip Assignment Summary

Distribution	Access Assigned To	
	County Road 29	Strathburn Street
North via County Road 29	90%	10%
South via County Road 29	65%	35%
East via Almonte Street		
West via Almonte Street		

In order to minimize impacts of development traffic on the existing community along Malcolm Street, a southbound left turn prohibition is proposed at the Strathburn Street access. As such all traffic departing to the south/east have been assigned to County Road 29. For the purposes of this analysis, the traffic assigned to the Strathburn Street access that is arriving from the east via Almonte Street is assumed to use Malcolm Street.

Traffic generated by the proposed residential subdivision for the 2029 build-out year is shown in **Figure 3**.

Figure 3: 2029 Site Generated Trips



5.0 BACKGROUND TRAFFIC CONDITIONS

5.1 Historic Growth

In September/October of 2019 and 2021 Lanark County completed AADT counts along County Road 29. A comparison of the 2019 and 2021 traffic counts was completed to develop a background growth rate and can be seen in the following table.

Table 5: Traffic Count Data Comparison

Day	Year		Growth Rate
	2019	2021	
Tuesday	7660	7699	0.25%
Wednesday	7942	7901	-0.25%
Thursday	8034	8194	1%
TOTAL	**23,636**	**23,794**	**0.33%**

Based on the above traffic volumes, traffic growth along County Road is expected to be between 0% and 1%. To provide a conservative analysis, a growth factor of 1% was applied to traffic along County Road 29 during the AM and PM peak hours.

5.2 Other Area Developments

For the purposes of this report no other developments have been identified that would significantly impact traffic volumes within the study area.

Background traffic volumes for the 2029 buildout year and the 2034 horizon year can be found in **Figures 4** and **5**, respectively.

Figure 4: 2029 Background Traffic Volumes

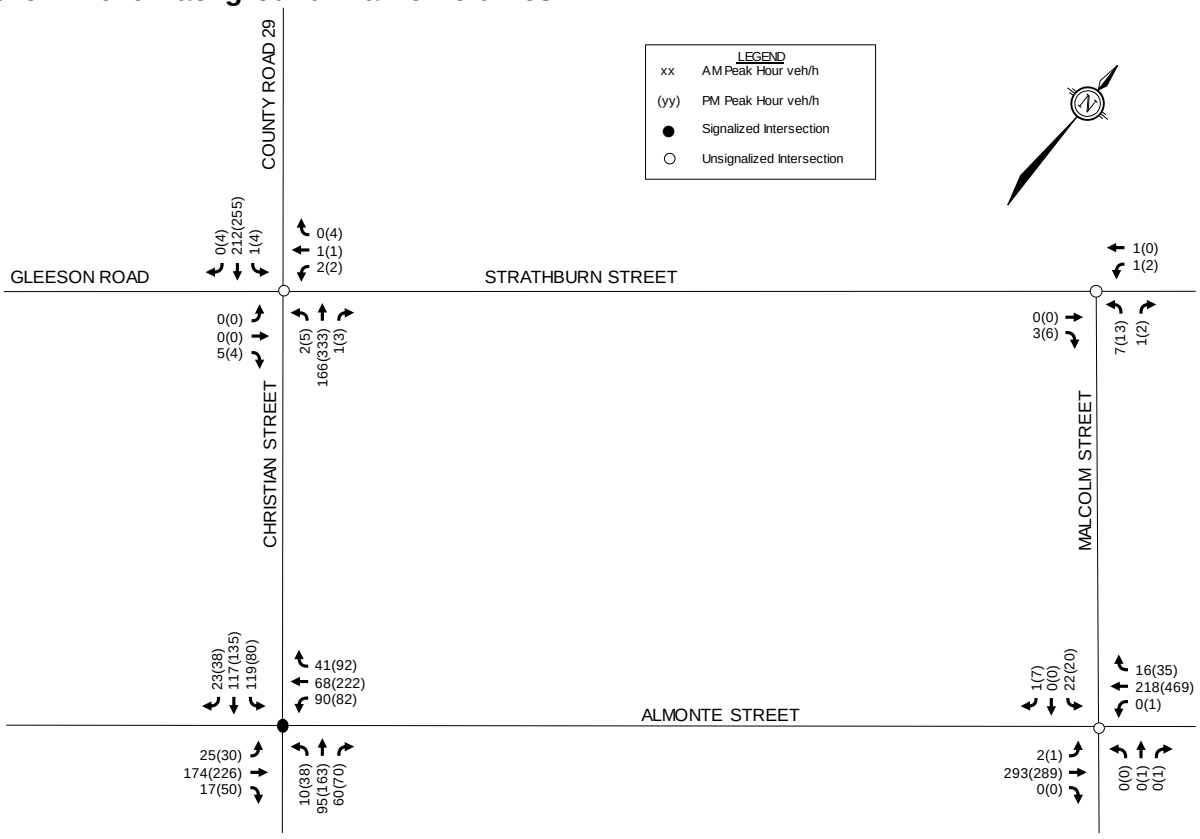


Figure 5: 2034 Background Traffic Volumes

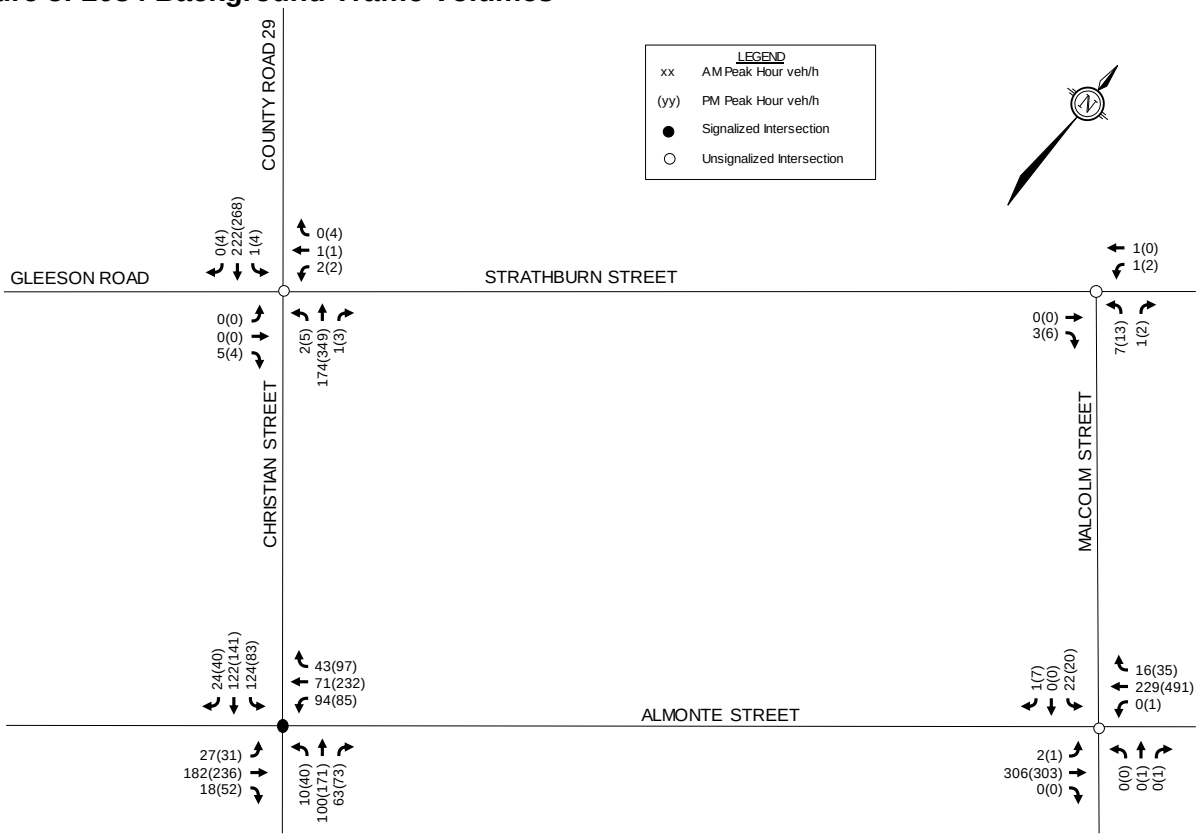

Total traffic volumes for the 2029 build out year and 2034 horizon year have been calculated by adding the site generated traffic volumes with the projected background traffic volumes. Total traffic volumes for 2029 and 2034 are shown in **Figures 6** and **7**, respectively.

Figure 6: 2029 Total Traffic

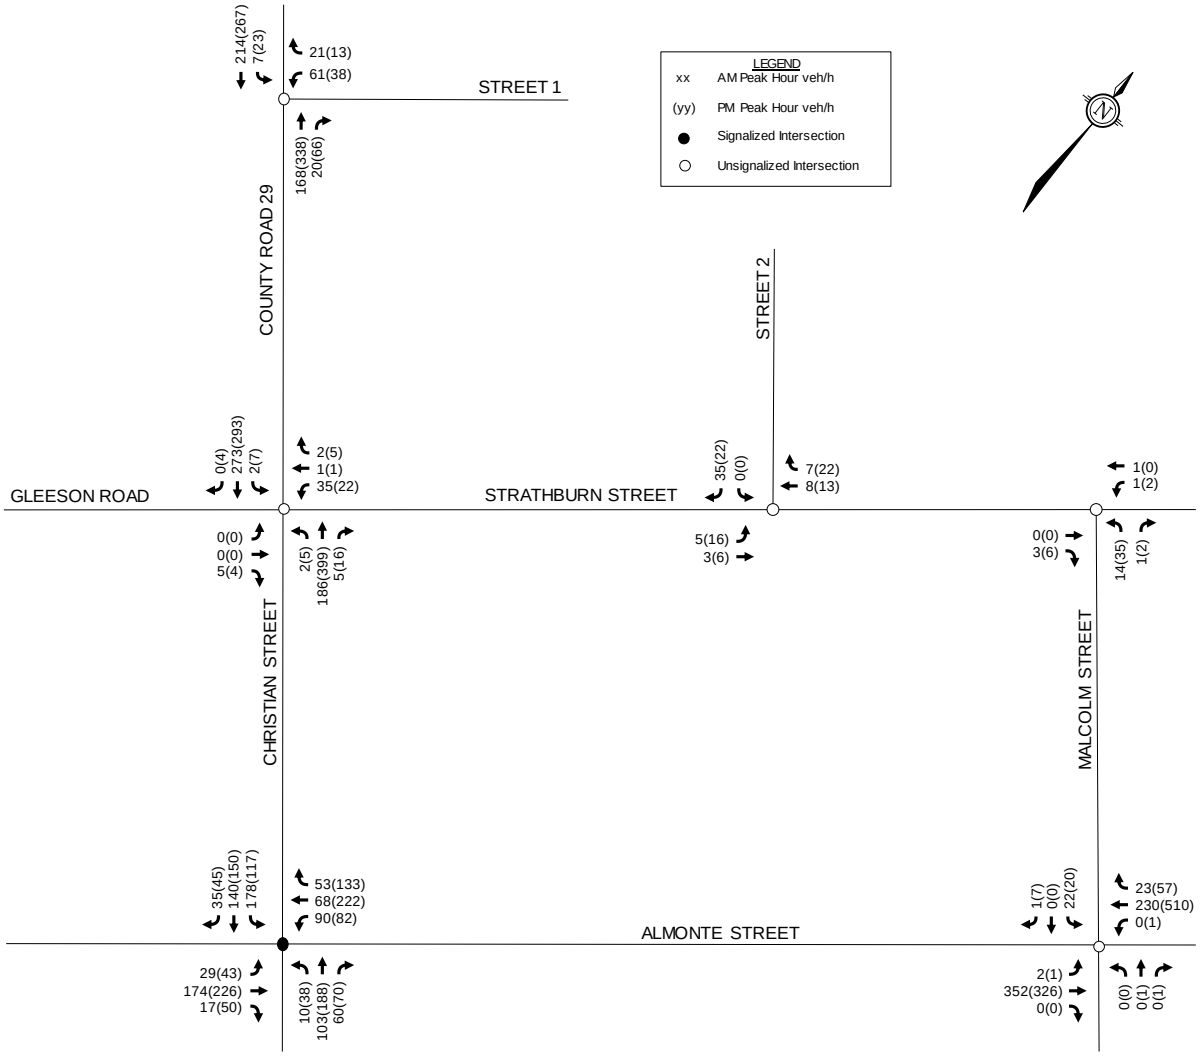

Figure 7: 2034 Total Traffic

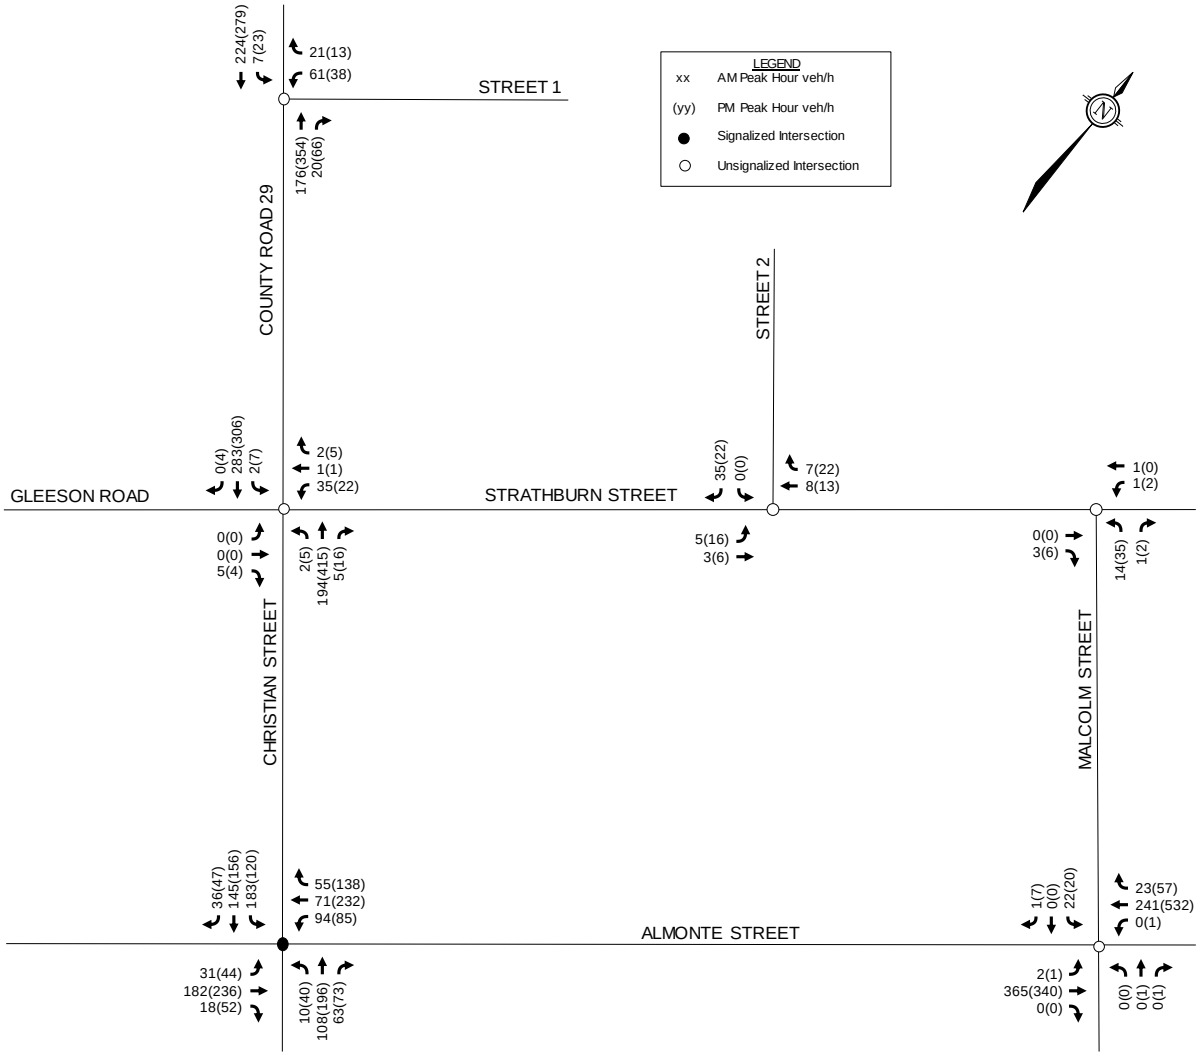


6.0 INTERSECTION OPERATING CONDITIONS

6.1 Existing Traffic Operations

Intersection capacity analysis has been completed for the existing traffic conditions. The results of the analysis are summarized in the following table for the weekday AM and PM peak hours. The traffic signal timing plan for the Almonte Street/Christian Street intersection was obtained from the County and is included in **Appendix C**. Detailed synchro reports are included in **Appendix D**.

Table 6: Analysis Results - Existing Traffic Conditions

Intersection	AM Peak			PM Peak		
	V/C or Delay	LOS	Mvmt	V/C or Delay	LOS	Mvmt
CR29/Strathburn St/Gleeson St	12 sec	B	WB	12 sec	B	WB
Christian St (CR29)/Almonte St	0.68	B	WB	0.87	D	WB
Strathburn St/Malcolm St	9 sec	A	NB	9 sec	A	NB
Almonte St/Malcolm St	14 sec	B	SB	17 sec	C	SB

All movements at study area intersections are currently operating with an acceptable LOS.

6.2 Background Traffic Operations

Operating conditions at the study area intersections are summarized in **Table 7** for the 2029 and 2034 weekday AM and PM peak periods. Detailed reports are included in **Appendix D.**

Table 7: Analysis Results - Background Traffic Conditions

Intersection	AM Peak			PM Peak		
	Delay or V/C	LOS	Mvmt	Delay or V/C	LOS	Mvmt
2029 Background Traffic						
CR29/Strathburn St/Gleeson St	12 sec.	B	WB	12 sec.	B	WB
Christian St (CR29)/Almonte St	0.65	B	WB	0.86	D	WB
Strathburn St/Malcolm St	9 sec	A	NB	9 sec	A	NB
Almonte St/Malcolm St	13 sec	B	SB	16 sec	C	SB
2034 Background Traffic						
CR29/Strathburn St/Gleeson St	12 sec.	B	WB	12 sec.	B	WB
Christian St (CR29)/Almonte St	0.68	B	WB	0.87	D	WB
Strathburn St/Malcolm St	9 sec	A	NB	9 sec	A	NB
Almonte St/Malcolm St	13 sec	B	SB	17 sec	C	SB

All movements at study area intersections continue to operate with an acceptable LOS under 2029 and 2034 background traffic conditions.

6.3 Total Traffic Operations

Operations at the study area intersections and the proposed accesses have been evaluated for the 2029 and 2034 total traffic scenarios, as summarized in the following table. Detailed reports are included in **Appendix D**.

Table 8: Analysis Results - Total Traffic Conditions

Intersection	AM Peak			PM Peak		
	Delay or V/C	LOS	Mvmt	Delay or V/C	LOS	Mvmt
2029 Total Traffic						
CR29/Strathburn St/Gleeson St	13 sec.	B	WB	16 sec.	C	WB
Christian St (CR29)/Almonte St	0.67	B	WB	0.88	D	WB
Strathburn St/Malcolm St	9 sec	A	NB	9 sec	A	NB
Almonte St/Malcolm St	14 sec	B	SB	18 sec	C	SB
County Road 29/Street 1	11 sec.	B	WB	14 sec.	B	WB
Strathburn Street/Street 2	9 sec.	A	SB	9 sec.	A	SB
2034 Total Traffic						
CR29/Strathburn St/Gleeson St	13 sec.	B	WB	16 sec.	C	WB
Christian St (CR29)/Almonte St	0.70	B	WB	0.89	D	WB
Strathburn St/Malcolm St	9 sec	A	NB	9 sec	A	NB
Almonte St/Malcolm St	14 sec	B	SB	19 sec	C	SB
County Road 29/Street 1	12 sec.	B	WB	14 sec.	B	WB
Strathburn Street/Street 2	9 sec.	A	SB	9 sec.	A	SB

6.3.1 County Road 29/Strathburn Street/Gleeson Road

Operating conditions at the County Road 29/Strathburn Street/Gleeson Road intersection have been evaluated for the 2029 and 2034 total traffic scenarios, as shown in **Table 8**. Site generated traffic is not anticipated to have a significant impact on the operating conditions at this intersection. Under 2034 total traffic conditions, the intersection is anticipated to operate at a LOS B during the AM peak hour and a LOS C during the PM peak hour.

A left turn lane warrant analysis was conducted to confirm if a southbound left turn lane would be required under 2034 total traffic conditions. Based on a design speed of 70km/hr, the left turn lane warrants indicated that a southbound left turn lane at the County Road 29/Strathburn Street/Gleeson Road intersection would not be required. Left turn lane warrants are included in **Appendix E**.

6.3.2 Christian Street (CR29)/Almonte Street

Operating conditions at the Almonte Street/Christian Street intersection have been evaluated for the 2029 and 2034 total traffic scenarios, as shown in **Table 8**. Site generated traffic is not anticipated to have a significant impact on the operating conditions at this intersection. Under 2034 total traffic conditions, the intersection is anticipated to operate at a LOS B during the AM peak hour and a LOS D during the PM peak hour.

6.3.3 Strathburn Street/Malcolm Street

Operating conditions at the Strathburn Street/Malcolm Street intersection have been evaluated for the 2029 and 2034 total traffic scenarios, as shown in **Table 8**. Site generated traffic is not anticipated to have a significant impact on the operating conditions at this intersection. Under 2034 total traffic conditions, the intersection is anticipated to operate at a LOS A during the AM and PM peak hours.

6.3.4 Almonte Street/Malcolm Street

Operating conditions at the Almonte Street/Malcolm Street intersection have been evaluated for the 2029 and 2034 total traffic scenarios, as shown in **Table 8**. Site generated traffic is not anticipated to have a significant impact on the operating conditions at this intersection. Under 2034 total traffic conditions, the intersection is anticipated to operate at a LOS B during the AM peak hour and a LOS C during the PM peak hour.

6.3.5 County Road 29/Street 1

Operating conditions at the County Road 29/Street 1 intersection have been evaluated for the 2029 and 2034 total traffic scenarios, as shown in **Table 8**. Under 2034 total traffic conditions, the intersection is anticipated to operate at a LOS B during the AM and PM peak hours.

A left turn lane warrant analysis was conducted to confirm if a southbound left turn lane would be required under 2034 total traffic conditions. Based on a design speed of 70km/hr, the left turn lane warrants indicated that a southbound left turn lane at the County Road 29 access would not be required. Left turn lane warrants are included in **Appendix E**.

From the TAC Geometric Design Guide a right-turn taper with auxiliary lanes is required when the volume of decelerating or accelerating vehicles compared with the through traffic volume causes undue hazard. Generally, Novatech recommends a right turn lane should the volumes of right turning vehicles exceed 60vph. The 2034 Total Traffic scenario projects 20 right turning vehicles in the AM peak hour and 66 in the PM peak hour. As the 60vph guideline is marginally met in the PM peak hour a northbound right turn taper is proposed. The proposed right turn taper is similar to the existing taper at the County Road 29/Strathburn Street/Gleeson Road intersection. A functional design of the proposed northbound right turn taper is included in **Appendix F**.

6.3.6 Strathburn Street/Street 2

Operating conditions at the Strathburn Street/Street 2 intersection have been evaluated for the 2029 and 2034 total traffic scenarios, as shown in **Table 8**. Under 2034 total traffic conditions, the intersection is anticipated to operate at a LOS A during the AM and PM peak hour.

6.4 Sensitivity Analysis

Figure 9.1A of the MMTMP identifies the recommended road hierarchy within Almonte and classifies both Strathburn Street and Malcolm Street as collector roadways. Table 15 and 16 of the MMTMP identifies typical characteristics for local and collector roadways. Urban local roadways are expected to carry less than 1,000 Annual Average Daily Traffic (AADT) or 100 vehicles per hour (vph). Rural collector roadways are expected to carry less than 5,000 AADT or 500 vph while urban collectors carry less than 10,000 AADT or 1,000 vph. These thresholds are generally consistent with Table 2.6.4 and 2.6.5 of the Transportation Association of Canada (TAC) Geometric Design Guidelines, which recommends less than 1,000 AADT for urban local roads, 5,000 AADT for rural collector roads, and 8,000 AADT for urban collector roads.

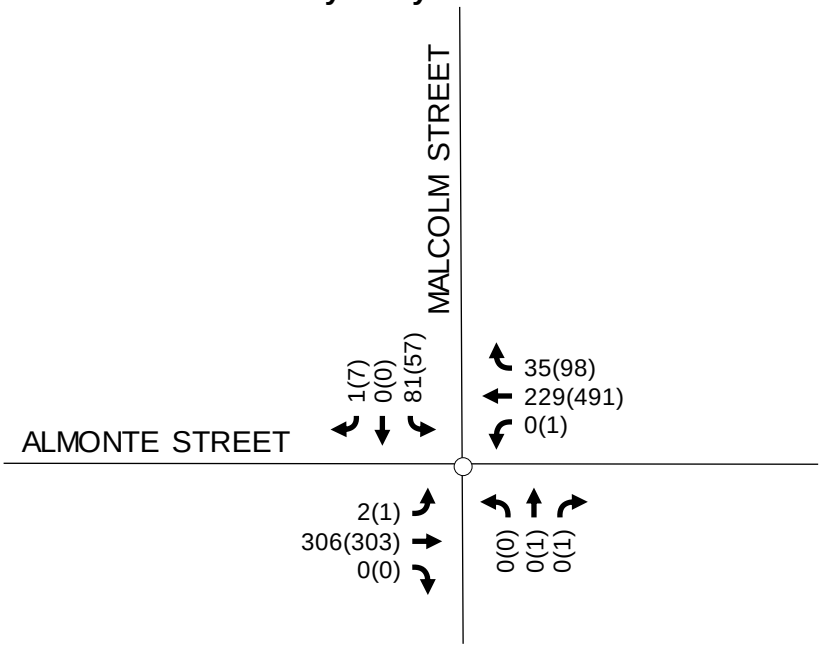
The traffic count conducted at Malcolm Street/Almonte Street identifies 41 vph along Malcolm Street during the AM peak hour and 64 vph during the PM peak hour. The traffic count conducted at Strathburn Street/Malcolm Street identifies 11 vph along Strathburn Street during the AM peak hour and 19 vph during the PM peak hour. Although both Malcolm Street and Strathburn Street are classified as collector roadways, existing vehicular volumes are within the MMTMP and TAC threshold for a local roadway.

Though Malcolm Street is designated as a collector roadway, the existing traffic and design is more consistent with that of a local road. Based on the trip generation presented in **Table 3** above, the proposed subdivision is anticipated to generate 155 vph during the AM peak hour and 199 vph during the PM peak hour. For Malcolm Street to exceed the threshold of a local roadway, approximately 40% of the overall traffic from the subdivision would need to access the subdivision via Malcolm Street and Strathburn Street during the AM peak hour, or 20% during the PM peak hour.

In response to Municipality and community concerns regarding potential impacts to Malcolm Street, a sensitivity analysis has been conducted to review a higher distribution of traffic to/from Almonte Street via Malcolm Street and Strathburn Street. The sensitivity analysis assumes that 50% of all site traffic arrives/departs via Malcolm Street and Strathburn Street. However, it is our professional opinion that due to the layout of the subdivision, turn restrictions at the Strathburn Street/Street 2 intersection, and operations at the Christian Street/Almonte Street intersection, the proposed subdivision traffic using this route will be far less. The traffic scenario with the 50%

site traffic being assigned to Malcolm Street and disobeying the proposed southbound left turn prohibition at the Strathburn Street/Street 2 intersection is shown in the following figure.

Figure 8: 2034 Total Traffic – Sensitivity Analysis



Conservatively assuming 50% of all site traffic arrives/departs via Malcolm Street and Strathburn Street results in 119vph during the AM peak hour and 164vph during the PM peak hour along Malcolm Street. This is well within acceptable thresholds for a collector roadway in the MMTMP and TAC Guidelines (800-1,000vph). Operations at the Almonte Street/Malcolm Street intersection under 2034 total traffic conditions with 50% of site traffic arriving/departing to the east are summarized in the following table.

Table 9: Intersection Operations – Sensitivity Analysis

Intersection	AM Peak			PM Peak		
	V/C or Delay	LOS	Mvmt	V/C or Delay	LOS	Mvmt
Almonte St/ Malcolm St	15 sec	B	SB	21 sec	C	SB

Based on the above, 50% of site traffic arriving and departing to the east via the Almonte Street/Malcolm Street intersection is anticipated to increase southbound delays from 13 seconds to 15 seconds during the AM peak hour and from 17 seconds to 21 seconds during the PM peak hour, compared to the 2034 background traffic condition. The increased delays result in an acceptable LOS B or C.

Detailed synchro reports are included in **Appendix D**.

7.0 ON-SITE DESIGN

7.1 Site Access

Intersection sight distance (ISD) at the proposed accesses have been determined using the Transportation Association of Canada (TAC) *Geometric Design Guidelines for Canadian Roads.* The ISD requirements for the Strathburn Street access, based on a design speed of 60km/h, is as follows:

- Left Turn from Minor Road 130 metres
- Right Turn from Minor Road 110 metres

As shown on the proposed draft plan shown in **Appendix A** there is roughly 150m to the high point of the road to the west of the proposed Strathburn Street access and therefore sufficient ISD for left turning vehicles. As there is roughly 150m of clear sight distance between the proposed Strathburn Street access and Malcolm Street there is sufficient ISD for right turning vehicles. The ISD requirements for the County Road 29 access, based on a design speed of 70km/h, is as follows:

- Left Turn from Minor Road 150 metres
- Right Turn from Minor Road 130 metres

As the County Road 29 access meets County Road 29 and perpendicular angle and no sightline obstruction have been identified based on a desktop review, available sightlines are within recommended guidelines to allow safe all directional access to the development.

7.2 Subdivision Design

All streets within the subdivision have a proposed right of way (ROW) width of 18.0m. Sidewalks are proposed on all roadways within the subdivision to provide pedestrian connectivity to the surrounding roadways and the proposed park. Cyclists will be accommodated within shared use lanes along the roadways within the subdivision.

As part of the proposed development, portions of the existing mountain bike trail on the north side of the Mississippi River that meander through the subject property to connect to Strathburn Street will be removed. A new stone dust pathway is proposed through the pump station/park, connecting Street 2 and Street Five. It will continue north of Street 5 along the north tributary. A stone dust pathway is also proposed in the northeast corner of the subdivision, connecting Street 5 to the existing mountain bike trail along the Mississippi River. Opportunities for a potential river lookout east of Street 5 will be investigated during the detailed design of the subdivision. A network and pathways plan is provided in **Figure 9**.

Minimum spacing between intersections was reviewed as per section 9.4.2 of the Geometric Design Guide from TAC. The typical minimum spacing for local roads is 60m for four-legged intersections and 40m for three-legged intersections according to the Geometric Design Guide. The intersection spacing within the proposed development meets TAC requirements.

Side street stop control on the minor street is proposed at each of the proposed intersections. The location of each of the proposed stop signs is shown in **Figure 9**.

8.0 OFF-SITE DESIGN

While the sensitivity analysis presented in **Section 6.4** did not identify a need for mitigation measures to address development traffic infiltration along Malcolm Street, several alternatives were discussed with the Municipality to address community concerns.

The opportunity to provide a "pork chop" splitter island on Street 2 at Strathburn Street was discussed with Municipality staff. The pork chop island would physically restrict Street 2 to right-in right-out operation and prohibit drivers from performing the southbound left turn movement from Street 2 onto Strathburn Street. This alternative would limit the number of vehicles exiting the subdivision via Strathburn Street and Malcolm Street. Due to operational concerns associated with the pork chop island, this alternative was not suitable for Municipality staff.

The opportunity to convert Strathburn Street to one-way eastbound operation between Street 2 and Malcolm Street was discussed with Municipality staff. In addition to the one-way operation, signage would be to prohibit the southbound left turn movement from Street 2 onto Strathburn Street. This alternative would limit traffic from the subdivision from arriving or departing via Strathburn Street and Malcolm Street. Due to operational concerns and impacts to existing residents on Strathburn Street, this alternative was not suitable for Municipality staff.

As the aforementioned alternatives were not carried forward, signage is proposed to prohibit the southbound left turn movement from Street 2 onto Strathburn Street. The proposed signage is intended to minimize the impacts of development traffic on the existing community along Malcolm Street.

As described in Section 2.0 and 3.0 above, the 2016 MMTMP identifies Strathburn Street and Malcolm Street as collector roadways and designates them as Urban Secondary Cycling Routes. It also identifies the future implementation of a sidewalk along Strathburn Street between Christian Street and Malcolm Street as well as along Malcolm Street between Strathburn Street and Dunn Street. The future cycling and pedestrian improvements identified in the 2016 MMTMP will provide system connectivity between the proposed on-site facilities and the existing community to the southeast.

The 2016 MMTMP identifies the cycling and pedestrian improvements along Strathburn Street and Malcolm Street as low or medium priority. As the Municipality is currently updating the TMP, it is recommended that the aforementioned facilities be prioritized to meet the needs of the existing and future communities.

9.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of the foregoing analysis, the main conclusions and recommendations of this report are as follows:

- The proposed development is anticipated to generate 153 trips (38 in, 115 out) in the AM peak and 198 trips (125 in, 73 out) in the PM peak;

- Site generated traffic is not anticipated to have a significant impact on the operating conditions at the County Road 29/Strathburn Street/Gleeson Road, Christian Street (CR29)/Almonte Street, Strathburn Street/Malcolm Street, and Almonte Street/Malcolm Street intersections;

- The County Road 29/Street 1 intersection is anticipated to operate with a LOS B during the AM and PM peak hours under the 2034 total traffic conditions. A southbound left turn lane is not warranted at this intersection. However, a northbound right turn taper is recommended based on the projected traffic volumes,

- The Strathburn Street/Street 2 intersection is anticipated to operate with a LOS A during the AM and PM peak hours under the 2034 total traffic conditions. Auxiliary turn lanes are not warranted at this intersection;

- Based on the sensitivity analysis of an unrealistic traffic distribution and assignment, 50% of site traffic arriving and departing to the east via the Almonte Street/Malcolm Street intersection is anticipated to increase southbound delays from 13 seconds to 15 seconds during the AM peak hour and from 17 seconds to 21 seconds during the PM peak hour at the Almonte Street/Malcolm Street intersection. The southbound delays correspond to a LOS B or C and are considered acceptable. However, it is our professional opinion that due to the layout of the subdivision, turn restrictions at the Strathburn Street/Street 2 intersection, and operations at the Christian Street/Almonte Street intersection, the proposed subdivision traffic using this route will be far less;

- Sufficient intersection sight distance is available at each access for all turning movements;

- Sidewalks are proposed on one side of all roadways within the subdivision to provide pedestrian connectivity to the surrounding roadways and the proposed park. Cyclists will be accommodated within shared use lanes along the roadways within the subdivision;

- A new stone dust pathway is proposed through the pump station/park, connecting Street 2 and Street Five. It will continue north of Street 5 along the north tributary. A stone dust pathway is also proposed in the northeast corner of the subdivision, connecting Street 5 to the existing mountain bike trail along the Mississippi River. Opportunities for a potential river lookout at this location will be investigated during the detailed design of the subdivision;

- Signage is proposed to prohibit the southbound left turn movement from Street 2 onto Strathburn Street. The proposed signage is intended to minimize the impacts of development traffic on the existing community along Malcolm Street;

- The future cycling and pedestrian improvements identified in the 2016 MMTMP will provide system connectivity between the proposed on-site facilities and the existing community to the southeast. As the Municipality is currently updating the TMP, it is recommended that the aforementioned facilities be prioritized to meet the needs of the existing and future communities.

Based on the foregoing, the proposed development can be recommended from a transportation perspective.
