

Wild Parsnip Control Type by County Roads

Lanark County bases decisions for control on wild parsnip infestation levels:

- Medium to heavy infestations are generally controlled by boom spraying, light infestations are controlled by spot spraying and very light infestations are controlled by hand control, with some exceptions.
- Control decisions may be subject to change based on the wild parsnip inventory (conducted prior to spraying) and plant growth throughout the season.

Control Type Definitions:

Boom	Spraying by a boom arm to control all wild parsnip in the road allowance
Targeted Boom	Small scale boom spraying, generally <500m, of a wild parsnip patch (May be only a portion of the road allowance width) where infestation levels are too heavy for spot spraying
Spot	Spraying by hose and a hand held nozzle, where only targeted plants are sprayed
Targeted Spot	Spot spraying of a targeted wild parsnip patch, generally <10% of the road section, where infestation levels are too heavy for hand pulling
Hand R County Forces	Digging, pulling, cutting and clipping of wild parsnip by County forces
Adopt	Section is adopted by an Enhance Adopt-A-Road group that digs, pulls, cuts and clips wild parsnip (contact the Public Works office for more information or how to get involved)

Revision Date: July 5, 2024
